clipped 0.00%

Signed difference = 100 × (DSpec − YSpec) / max |DSpec|. Denominator = 2.17589e-16 s m⁻³ over the full, unclipped section.
Difference colour limit covers every residual sample; no residual clipping. DSpec and YSpec retain their shared colour scale.
Colours interpolate within native SEM elements. Radius ≥ 3000 km. No degree-convergence claim.
