

Signed difference = 100 × (DSpec − YSpec) / max |DSpec|. Denominator = 1.04579e-14 s m⁻³ over the full, unclipped section.
Difference colour limit: 99th percentile below 150 km depth; >5° from endpoints. Larger values are clipped for display. DSpec and YSpec retain their shared colour scale.
Colours interpolate within native SEM elements. Radius ≥ 3000 km. No degree-convergence claim.
